They are not funds by the sale of official rank. very different from those indicated at the jections against this mode of disposal of the by a large number of his Masonic friends and rubbish. The expense, he said, would be his comrades in the Police Force. great, and the smoke from it would, in certain quarters of the wind, he undoubtedly a amounting to nearly Tis. 18,000, has been signed nuisance. Dr. ATRES, however, gave pretty between the Pooting Dock Company and Measts. S. C. Farnham & Co., for the reconadmitted. If there were any practicable the Dock Co., shall at once commence another site could be found for the destructor, and by the President, to the following effect ;-

extension of Kowloon, it appears to me highly probable that the proposed site of deposit may be reclaimed and become profitable building land. I need hardly may that there are the attongest objections from a sanitary point of view to the erection dwalling houses over deposits of town subblah. It seems to us that these objections apply

to nearly all land in the work limited area ly scarce and increasingly valuable, and it very undesirable that any portion of the foreshore on either aide of the barbour should be rendered unhealthy by depositing the building called the Hall of Pray rubbish upon it. At the same time we think there is good ground for Mr. EDB's want of faith in the efficacy of the alternative schome, which is to be adopted. "The moment the contractor gets beyond waters of the colony," he says, " you lose al control over him, and there is nothing prevent him from dumping it on Cow-s chow, Lantac, or any of the neighbouring islands, and sooner or later we shall get i back into the harbour." The members satisfied with the scheme they propose to adopt, and it certainly is not free from objection. As Mr. EDE suggests we are in great danger of seeing the

rubbish back. The water in the harbour already sufficiently fouled owing to the drains emptying in it and the rubbish by all the leading and most eminent Medical and fifth from the innumerable vessels and craft frequenting it. The Chinese contrac inspection proposed they will find or make TRANSPARENT, guaranteed to contain 20 per contract; they will be sure to get rid of their burden as quickly and as conveniently as greater expense, therefore, and send the refuse out eight or ten miles to sea and get rid of it there? If small towns in England TRANSPARENT, guaranteed to contain 10 per do not find this system too expensive fo their resources surely this colony ought to be able to afford it.

THE MAIL SERVICE TO CHINA.

Mr. H. Hill, the assistant secretary of the P.

Campbell's question about the proposed mail service to China via Canada, did practically, though unintentionally, some injustice to the actual service via Brindisi, I beg to inform you that the route than that which new exists via Brindisi of sending troops scross the Atlantic.

I the present six days' overland service (which wil be greatly expedited when the company commences to carry the mails) and 134 knots speed across the Pacific (with 12 hours' detention at Yokohama), the time between England and Shanghai would be 30 days, or 44 days quicker than the fastest P. and O. time via Brindisi, and nearly two weeks faster than via Gibralter. Bir George Baden-Powell states:--Mr. Hill wrote a letter giving the actual time made by

the eastward route to Hong Kong as 304 days. wrote that the actual time, as estimated b the highest authorities, for the westward route would be 30d days. Mr. Hill replies that the new contract time by the westward route is 38 days (as a matter of fact it is 354 days). I now complete the circle by pointing out that the new contract time by the eastward route is 35} days. It may be well to give the full figures:—The new P. and O. contract (March 8th, 1887) enjoins four "periods of transit between Brindisi and Shanghal, according to direction and period of year-respectively 894. 346, 994, and 870 hours—the average being 894 hours, to which we add 50 hours for trausit petween England and Brindisi, making a total of 994 hours, or 394 days. Shanghai, according to Mr. Hill, is four days beyond Hongkong, so hat the new contract time to Hongkong would be 854 days. The new Canadian Pacific contract July 15th, 1889) enjoins two "periods of transit," occording to time of year, between Halifar and Hongkong, respectively of 684 and 732, hours giving an average of 708 hours, or 29t days, to which we may add six days for the Atlantic passage, giving a total contract time of 85k days. There need by no detention coming or going. ither at Halifax or Vancouver.

As there seems confusion as between contract and actual times. I may tabulate the figures :--New Contract Times Actual Times East-West-East-West-
